New Paintwork Product Promises to Make Your Car Glare

If you are fed up of cleaning your car every weekend, we may have just found the right solution for you. Glare 2000 adds a 3-dimensional glass shine to your car eradicating the need for further waxing or polishing for up to 5 years. It is also favoured by aircraft operators due to the gleaming non-stick surface resulting in improved fuel efficiency by 5-10%

Glare 2000 have just launched their paintwork treatment here in the UK. Glare 2000 UK is based here in Worcester but, the professionally applied treatment has been available in American for 5 years.

It is so effective that it has been approved for use on President Obama's Air Force One Jet and leading Formula One teams.

Speaking about the launch of Glare 2000 UK, Nick Bicknell, MD, said ***"We are very excited to bring this paint treatment service to the UK market. All car, caravan and commercial vehicle owners in the UK can now benefit from having the treatment applied. Our professional application experts will even come to your home or workplace to treat your vehicle."***

The coating that Glare 2000 puts on your paintwork means that your car is protected from acid erosion caused by bird droppings, acid rain and even stops paint stripper from burning through and damaging your car for up to an hour. As dirt and grime will no longer stick, you simply need to wash your vehicle over with a sponge and clean water to ensure it stays sparkling and, if you have it applied by a member of the Glare 2000 UK team, you receive a 5-year guarantee.

For more information about Glare 2000 UK please visit www.car-wax-polish.co.uk or call the team on 01905 422 115.
